TARA - TARGETED ACQUISITION & REACH AGENT

Turn customer data into targeted growth.

An intelligent voice AI customer acquisition and engagement platform powered by Gnani.ai.

THE PROBLEM

Banks and financial institutions hold extensive customer data, but turning that data into meaningful customer engagement remains a challenge.

Customer acquisition campaigns often rely on manual calling, disconnected customer records and generic outreach. Employees spend valuable time contacting customers without always knowing which products are relevant to them. India's linguistic diversity adds another challenge: customers should be able to communicate in the languages they naturally speak.

The opportunity is not simply to make more calls. It is to reach the right customer with the right product through the right conversation.

THE SOLUTION

TARA transforms customer data into targeted, intelligent voice outreach through an integrated customer acquisition workflow.

1. **Customer Data Ingestion:** Import customer records and leads through CSV, validate data, map fields, identify duplicates and apply consent safeguards.
2. **Product-Fit Intelligence:** Configure financial products and eligibility criteria, score customers against products, prioritise relevant audiences and provide explanations for matching decisions.
3. **Gnani-Powered Voice Conversations:** Launch targeted outbound campaigns through a conversational voice agent that listens, understands and responds to customers.
4. **Outcome Intelligence:** Capture conversation transcripts, customer intent, interest, declines and callback requests, then update customer records and campaign analytics.

THE GNANI AI INTEGRATION

Gnani's speech technologies power the voice experience at the heart of TARA.

- **Gnani Prisma:** Speech-to-text recognition for understanding customer responses.
- **Gnani Timbre:** Text-to-speech generation for natural voice responses.

Together with Groq for conversational reasoning and Twilio for telephony, TARA orchestrates a real-time, multi-turn voice interaction workflow.

The product demonstrates conversations in Telugu, Hindi and Indian English, with Telugu featured in the project demonstration.

WHAT MAKES TARA DIFFERENT?

TARA does more than automate outbound calls. It connects the complete journey:

Customer Data → Product Matching → Targeted Campaign → Intelligent Voice Conversation → Actionable Outcomes

It puts customer intelligence before communication and turns conversations into structured business insights.
